Tullig.Net brings to you a wealth of experience in Open Source systems consultancy and database integration. Working to provide end-to-end integration between the desktop and the data and using Open Source licensed software where ever possible to provide turnkey solutions at low cost and a high return on investment.

The products used by Tullig.net to assist businesses include the MySQL™ database running on either a Linux or Microsoft® platform and delivered to the desktop using web services from Apache and PHP as the application layer. This combination provides a highly portable set of components that can be moved easily between Linux, UNIX and Microsoft platforms as business needs dictate. There is also strong integration with office suites such as OpenOffice.org for businesses looking to reduce licensing costs by moving away from proprietary licenses to open licenses.

Tullig.Net is ideally placed to assist you in developing your web based applications and moving your business to software licensed under the open model. Please use the links above to visit the software companies sites to see the full feature lists and use the navigation panel on the left to see how Tullig.Net can make these products work for you. We can advise on the software and provide a full range of services including system architecture design, installation and configuration as well as user training and follow-up support in

- Relational database performance analysis and tuning
- Linux & UNIX performance analysis and tuning
- Database capacity planning

- Web site design, construction and maintenance
- Web based application engineering
- Database design and integration

- Database & UNIX consultancy and training
